4.1 FLANGE/BACK-FOCUS ADJUSTMENT

The flange adjustment can be optimized by modifying the thickness of the flange shim (17)

- Mount a PL checker on the lens
- Mount the lens on the projector
- Calibrate the distance between the screen and the focal plan at 6'
- Optimize the focus at long focal length
- Then, zoom to short focal length
 - If the best focus plan is between the screen and the lens, it is necessary to decrease the thickness of the shim (17)
 - If the best focus plan is behind the screen, it is necessary to increase the thickness of the shim.(17)
- To replace the flange shim (17), remove the PL mount (18) (Picture 4 & 5)
 - Remove the shim (17) (Picture 5)
 - Install the new shim (17)
 - Mount the PL mount (18)
 - Reset the focus at the long focal length and repeat the procedure as described above

Picture 5

4.1 REGLAGE DU TIRAGE

Le réglage s'effectue par modification de l'épaisseur de la cale de tirage (17):

- Monter un vérificateur PL sur l'objectif,
- Monter l'objectif sur une lanterne de projection,
- Se positionner à une distance de 1,80m (entre l'écran et plan image),
- Faire la meilleure MAP à la longue focale,
- Puis se mettre à la courte focale :
 - Si le plan de meilleure MAP est entre l'écran et le zoom, il faut diminuer l'épaisseur de la rondelle de tirage(17).
 - Si le plan de meilleure MAP est derrière l'écran il faut augmenter l'épaisseur de la rondelle de tirage (17).
- Pour changer la rondelle de tirage, enlever la monture PL (18) (Photo 4 & 5)
- Retirer la rondelle de tirage (17) (Photo 5)
- Modifier l'épaisseur de la cale pelable de tirage (17)
- Remonter la rondelle de tirage(17),
- Remonter la monture PL (18)
- Refaire le meilleur MAP à la longue focale puis dérouler à nouveau la procédure comme indiqué auparavant

Picture 5

4.2 TRACKING ADJUSTMENT

- Unscrew the 3 screws (10) and remove the rear cover (11)
- Mount a PL checker
- Put the lens in projection focused at a distance of 6' at the long focal length
- Place a marker in the centre of the image
- Put the lens at the short focal length
- Measure the distance T between the centre of the marker and the centre of the short focal length
- Adjust the tracking T at short focal length with the screws (12) (Picture 6b) to be conform with the specification (Picture 6a)
- Repeat the operation if necessary
- Reinstall the rear cover (11)

6 DEPTH-OF-FIELD TABLES 6 TABLES DE PROFONDEUR DE CHAMP

ZOOM Super 35

F = 19.5 - 94 mm

The depth of field tables are provided for informational purposes only and are estimated with a circle of confusion of 0.025mm (1/1000inch).

The width of the sharpness zone grows proportionally with the focus distance and aperture and it is inversely proportional to the focal length.

In practice the depth of field limits can only be defined accurately by performing screen tests in true shooting conditions.

Les tables de profondeur de champs sont fournies à titre indicatif pour un cercle de confusion moyen de 0,025mm (1/1000inch). La profondeur de champ augmente proportionnellement avec la distance de mise au point ainsi qu'avec le diaphragme et est inversement proportionnelle à la focale.

Dans la pratique, seuls des essais filmés dans des conditions de tournage vous permettront de définir les bornes de cette profondeur de champ avec un maximum de précision
